Jundiaí-SP – Brazil

Experienced software engineer (13+ years) and **team lead** with expertise in **Python**. Contributed to **open source** projects as a maintainer and regular contributor, actively engaged in the Python community through conference participation and organization.

Skills

- **Languages and Frameworks:** Python, JavaScript, HTML/CSS, Django, FastAPI, ReactJS, Express.js
- **Technologies and Tools:** Django REST Framework, PostgreSQL, MongoDB, Celery, AWS
- **Other:** Unit testing, API design, relational databases, open source maintainer and contributor, code reviews, documentation writing

Work Experience

Nov/2025 – present Canary Technologies, Senior Software Developer

- Built Django data pipelines and integrations with enterprise PMS vendors, using APIs, webhooks, and file reports to ingest reservation, guest, upsell, payment, and core hotel operations data.
- Maintained existing integrations to ensure continuous data validity and synchronization of hotel operations across more than 20k properties.
- Integrated AI tools like Claude into daily workflows for development planning, code reviews, and custom tooling to optimize engineering processes.

2024 – 2025 Xometry, Senior Software Developer

- Developed and maintained the core backend pricing service using Python and Flask, directly influencing product pricing, margins, and customer-facing revenue operations.
- Engineered new material options into the pricing engine, expanding available 3D printing products and enabling new transactional business flows.
- Integrated AI tools like Cursor and Claude into the engineering workflow to accelerate code comprehension and streamline legacy system analysis.

2023 – 2024 Shippo, Senior Software Developer

- Created and maintained Django applications integrating with third-party APIs of carriers, enabling customers to compare rates and generate shipping labels in our centralized platform.

2022 – 2023 Six Feet Up, Senior Python Developer

- Developed Django and DRF applications for event management, climate data, and academic systems, collaborating with frontend teams via OpenAPI/Swagger documentation.
- Enforced code quality and best practices across the engineering team through active code reviews and feedback.

2017 – 2022 Zyte (former Scrapinghub), Python Developer and Team Lead

- Managed a 6-developer team across two projects, organizing tasks, conducting code reviews, and providing technical and career support. Collaborated closely with clients, guiding project prioritization for seamless execution.
- Orchestrated the development of Python and Scrapy-based web scraping applications, delivering structured data, optimizing data acquisition efficiency, and significantly boosting customer satisfaction.
- Led the release of Spidermon, an open source web scraping monitoring tool, promoting collaboration and innovation within the developer community. Contributed to the development of other company-maintained open source projects by assisting in defining project priorities and guiding their development.

2021 EliteGamingLive, Freelance Python Developer

- Built a Django/DRF API integrated with a ReactJSr frontend to manage real-time eSports competitions for 50+ simultaneous players.
- Designed the initial AWS infrastructure using Docker and PostgreSQL, while leading a team of two developers through task organization and code reviews.

2013 – 2017 Media Works, Software Developer

- Engineered Python microservices modules that powered a POS system for catering, resulting in successful deployment across 30+ restaurants within a fast-food chain.

2012 – 2013 Nokia Solutions and Networks

- Developed and maintained a Django application for management of internal company processes. Utilized Celery and RabbitMQ for tasks processing.

Projects & Other Activities

- **Querido Diário** – Maintainer of open source project crawling and releasing official documents of Brazilian cities, overseeing code reviews, development, and community engagement.
<https://github.com/okfn-brasil/querido-diario/>
- **Spidermon** – Maintainer of extension that monitors web crawlers developed using Scrapy framework. Led process to release it as open source project.
<https://github.com/scrapinghub/spidermon/>

Education

- Electrical Engineering – State University of Campinas – UNICAMP
Graduated in Jul/2012
